Mathematics education expert Jo Boaler shows teachers how to get students excited about learning math and mastering the big ideas that lead to math success.

The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. This book turns research findings into practical activities and advice, showing how students can go from self-doubt to strong self-confidence.

Jo Boaler, Ph.D., is professor of mathematics education at Stanford University, co-founder of the math education website youcubed.org and White House presenter on girls and STEM. She was named by the BBC as one of the eight people "challenging the future of education."
