

The background is a deep blue with a complex pattern of glowing, thin white and light blue lines. These lines form various geometric shapes, including circles, arcs, and intersecting paths, creating a sense of mathematical precision and cosmic structure. Some lines are thicker and more prominent, while others are thin and delicate. The overall effect is one of dynamic energy and intellectual depth.

Algebra All-in-One For Dummies

Mary Jane Sterling

Algebra I All-In-One For Dummies covers all the algebra concepts for math students who are smart enough to know they need a little help. With step-by-step solutions and chapter quizzes online, every student can be successful in their algebra class.

For Dummies

From Euclidean to Hilbert Spaces

Introduction to Functional Analysis and its Applications

Edoardo Provenzi

Analyzes the transition from finite dimensional Euclidean spaces to infinite-dimensional Hilbert spaces. The focus is on the parallels and differences between the properties of the finite and infinite dimensions, noting the fundamental importance of coherence between the algebraic and topological structure.

Introduction to Theoretical and Mathematical Fluid Dynamics

Bhimsen K. Shivamoggi

Practical applications of mathematical fluid dynamics within science and engineering and highlights the study of fluid dynamics as a central theme in modern applied mathematics. A graduate-level textbook for courses on mathematical fluid dynamics for students majoring in mathematics, engineering, and physics.

Modern Computational Finance

Scripting for Derivatives and xVA, Volume 2

Antoine Savine & Jesper Andreasen

An incisive and essential guide to building a complete system for derivative scripting. Perfect for quantitative analysts, risk professionals, system developers, derivatives traders, and financial analysts, and a must-read resource for students and teachers in master's and PhD finance programs.

Random Evolutionary Systems

Asymptotic Properties and Large Deviations

Dmitri Koroliouk & Igor Samoilenko

Presents findings from a number of limit theorems and asymptotic expansions of processes that model complex stochastic systems, for both those that are autonomous and those dependent on an external random environment.

Planet Formation and Panspermia

New Prospects for the Movement of Life Through Space

Branislav Vukotic, Joseph Seckbach & Richard Gordon

An in-depth view of the panspermia hypothesis examined against the latest knowledge of planetary formation and related processes. Appeals to a wide audience across scientific disciplines covering astronomy, biology, physics and chemistry, and engineers involved in planning and realization of future space missions.

Physics I Workbook For Dummies with Online Practice, 3rd Edition

Daniel Funch Wohns & Steven Holzner

Physics is one of the most challenging classes many students will take during their high school career. With easy-to-follow explanations and practical example problems, *Physics I Workbook For Dummies* gives readers the straightforward instruction they need to confidently solve hundreds of problems.

Optical Fiber Sensing Technology

Principles and Practice

Tiegen Liu, Junfeng Jiang, Kun Liu & Shuang Wang

Comprehensive overview of optical fiber sensing technologies - from principles, techniques to industrial applications. It emphasizes the bridge connection between innovative basic research and practical engineering.

Vertical Cavity Surface Emitting Lasers

VECSEL Technology and Applications

Michael Jetter & Peter Michler

Leading research groups from Europe and the USA share their inside knowledge on all fundamental and technological aspects of vertical external cavity surface emitting lasers. VECSELs are used in high-tech areas such as biophotonics, spectroscopy, laser-based displays, projectors, and telecommunications.

Liquid Crystals

New Perspectives

Pawel Pieranski & Maria Helena Godinho

This book on liquid crystals reports on the new perspectives that have been brought about by the recent expansion of frontiers and overhaul of common beliefs, and deals with the spontaneous emergence of chirality in nematics made of achiral molecules, and a brief historical context of chirality.

Statistical Methods and Modeling of Seismogenesis

Nikolaos Limnios, Eleftheria Papadimitriou & George Tsaklidis

This book brings together a group of international authors, known for their earthquake-specific approaches, to cover the myriad aspects of Stochastic studies. Topics presented include statistical nonparametric and parametric methods, post-seismic activity models, time series Markov models with regression, and more.

Informatics and Machine Learning

From Martingales to Metaheuristics

Stephen Winters-Hilt

Informatics and Machine Learning describes math and statistical approaches to machine learning and Algorithms concepts geared towards graduate students and professionals. It uses highly optimized code and the reader is guided to not only understand it, but its mathematical underpinnings, assumptions, and wide applicability to other data sets.

Quantile Regression

Applications on Experimental and Cross Section Data using EViews

I. Gusti Ngurah Agung

QR is an important analytical tool in many disciplines such as statistics, econometrics, ecology, healthcare, and engineering. This textbook rigorously presents the use of Quantile Regression to obtain the richer information from models for data analysis. Professor Agung has taught at the University of Indonesia for three decades.
