Creativity : Seven Keys to Unlock your Creative Self

David Gauntlett
9781509554119
Pub Date: 1/10/23
\$24.95 USD
272 pages
Paperback
Social Science / Media Studies

Summary: This is a book about *doing* creativity. David Gauntlett presents seven keys to creativity: ways to rethink our capacities, unlock potential, and make a difference.

The artists and innovators we think of as “very creative” are just people, but they are the ones who have spent time developing ideas, and have turned them into something, and have found the confidence to share them with the world. None of these things comes naturally, so this book offers an array of research, advice and philosophy to fuel your understanding and passion for creativity.

David Gauntlett draws on 25 years’ experience researching creativity from unusual angles, and combines insights from diverse creators with his own experiences making music and drawings. He highlights the vitality of the individual creative voice in a world where social media offers a weird mix of inspiration and suffocation, and our strugg...

Deepfakes

Graham Meikle
9781509548217
Pub Date: 12/12/22
\$19.95 USD
160 pages
Paperback
Social Science / Media Studies

Summary: What happens when we can no longer believe what we see? Show the AI technologies that create deepfakes enough images of a celebrity or a politician and they will generate a convincing video in which that person appears to say and do things they have never actually said or done. The result is a media environment in which anyone’s face and image can be remixed and manipulated.

Graham Meikle explains how deepfakes (synthetic media) are made and used. From celebrity porn and political satire to movie mash-ups and disinformation campaigns, this book explores themes of trust and consent as face-swapping software becomes more common. Meikle argues that deepfake videos allow for a new perspective on the taken-for-granted nature of contemporary media, in which our capacity to remix and share content increasingly conflicts with our capacity to trust. The book analyses how such videos deepe...

Race and Digital Media : An Introduction

Lori Kido Lopez
9781509546930
Pub Date: 12/27/22
\$22.50 USD
224 pages
Paperback
Social Science / Media Studies

Summary: Since the early days of the internet, there have been questions about how emerging technologies might one day liberate or further harm communities of color that already face structural inequalities of racism. As reliance on computing technologies increases, it is also important to address questions about racial bias in the design of digital platforms, labor inequalities in tech industries, and digital surveillance on Black and Brown communities.

This book provides a comprehensive introduction to the theory and research on race and digital media. Focusing on the experiences of people of color in the U.S., it explores the various ways that racism and white supremacy have shaped aspects of our digital world—from the infrastructures and policies that support technological development, to algorithms and the collection of data, to the interfaces that shape engagement. Yet it also rev...

Screen Damage : The Dangers of Digital Media for Children

Desmurget
9781509546404
Pub Date: 12/27/22
\$24.95 USD
350 pages
Paperback
Social Science / Media Studies

Summary: All forms of recreational digital consumption – whether on smartphones, tablets, game consoles or TVs – have skyrocketed in the younger generations. From the age of 2, children in the West clock up more than 2.5 hours of screen time a day; by the time they reach 13, it's more than 7 hours a day. Added up over the first 18 years of life, this is the equivalent of almost 30 school years, or 15 years of full-time employment.

Most media experts do not seem overly concerned about this situation: children are adaptable, they say, they are 'digital natives', their brains have changed and screens make them smarter. But other specialists – including some pediatricians, psychiatrists, teachers and speech therapists – dispute these claims, and many parents worry about the long-term consequences of their children's intensive exposure to screens.

Semantic Media : Mapping Meaning on the Internet

Andrew Iliadis
9781509542581
Pub Date: 12/27/22
\$19.99 USD
160 pages
Paperback
Social Science / Media Studies

Summary: Media technologies now provide facts, answers, and 'knowledge' to people. Search engines, apps, and virtual assistants increasingly articulate responses rather than direct people to other sources.

Semantic Media is about this emerging era of meaning-making technologies. Companies like Apple, Google, Facebook, Amazon, and Microsoft organize information in new media products that seek to 'intuitively' grasp what people want to know and the actions they want to take. This book describes some of the insidious technological practices through which organizations achieve this while addressing the changing contexts of internet searches and examines the social and political consequences of what happens when large companies become primary sources of information.

Written in an accessible style, *Semantic Media* will be of interest to students and scholars in media, science and technology, communication, and social science.

If Science is to Save Us

Rees
9781509554201
Pub Date: 11/21/22
\$25.00 USD
200 pages
Hardcover
Education / Teaching / Subjects

Summary: There has never been a time when 'following the science' has been more important for humanity. At no other point in history have we had such advanced knowledge and technology at our fingertips, nor had such astonishing capacity to determine the future of our planet.

But the decisions we must make on how science is applied belong outside the lab and should be the outcome of wide public debate. For that to happen, science needs to become part of our common culture. Science is not just for scientists: if it were, it could never save us from the multiple crises we face. For science can save us, if its innovations mesh carefully into society and its applications are channelled for the common good.

As Martin Rees argues in this expert and personal analysis of the scientific endeavour on which we all depend, we need to think globally, we need to think rationally and we need to think long.

Summary: This book is a methodological guide intended for those who wish to better understand how to conduct research in the education and training sciences. It is organized into three main parts. The first part deals with postures, emphasizing the idea that engaging in a research process involves taking a different stance from that of a social or professional actor. For example, this may require converting a professional or social question into a research question or reflecting on the use of a social vocabulary in research.

The second part concerns practices, that is, how research is conducted: the definition of a research question based on findings, theoretical exploration and problematization, the production of empirical information and its analysis and restitution.

The third and final part concludes by focusing on the

Reimagining the Classroom : Creating New Learning Spaces and Connecting with the World

Theodore Richards

224 pages
Paperback
Education / Teaching

Summary: A practical approach to shared inquiry and exploration in K-12 classrooms

We are in a period of unknowns unlike any in a generation or more. As educators, we need new pathways and ideas that can help us educate children for the world to come.

Reimagining the Classroom: Creating New Learning Spaces and Connecting with the World provides practical steps and examples that parents and educators can use to begin to create new learning spaces, approaches, and outcomes. Dr. Richards' provocative book asks us to reconsider some of our basic assumptions about teaching and learning. It helps parents and educators question and recast these assumptions and practices while providing concrete, tested activities and ideas that will help readers reimagine educational spaces rooted in the notion that classrooms—and the stories we tell in them—are a metaphor for the world we hope to create.

Summary: Cognitive science research-based teaching techniques any educator can implement in their K-8 classroom

In *Small Teaching K-8*, a team of veteran educators bridges the gap between cognitive theory and the K-8 classroom environment, applying the same foundational research found in author James Lang's bestselling *Small Teaching: Everyday Lessons from the Science of Learning* to the elementary and middle school setting. Via clear descriptions and step-by-step methods, the book demonstrates how to integrate simple interventions into pre-existing pedagogical techniques to dramatically improve student outcomes.

The interventions consist of classroom or online learning activities, one-time additions, or small modifications in course design or communication. Regardless of their form, they all deliver powerful, positive consequences.

Political Science / World / European

Summary: After years of existential crisis, Europe has found a new *raison d'être*: the European Green Deal and the energy transition that lies at its core. This green Europe represents a normative vision, an economic growth strategy, as well as a route to a political Union that would enhance EU integration and legitimacy. But it can only be realized if it addresses head-on the social, economic, political and geopolitical ramifications of this epochal change.

In *A Green and Global Europe* Nathalie Tocci explains how the unprecedented nature of the current energy transition represents both a unique opportunity and a huge challenge to Europe's future prosperity. The EU, she argues, must not act in isolation or ignore the adverse effects of the transition on member states and neighbours. It must also address the global cleavages that may arise with China, the transatlantic relationship and th...

Summary: In this century, the world will conduct an extraordinary experiment in government. In 2050, forty percent of the planet's population will live in just four places: India, China, the European Union, and the United States. These are superstates -- polities that are distinguished from normal countries by expansiveness, population, diversity, and complexity.

How should superstates be governed? What must their leaders do to hold these immense polities together in the face of extraordinary strains and shocks? Alasdair Roberts looks to history for answers. Superstates, he contends, wrestle with the same problems of leadership, control and purpose that plagued empires for centuries. But they also bear heavier burdens than empires -- including the obligation to improve life for ordinary people and respect human rights.

One axiom of history was that empires always died. Size and complexity

Summary: The United Kingdom has been at the heart of global history for centuries – as a conqueror, an engine of international trade, and a symbol of modernity. It was the first industrial nation, the centre of the world's biggest empire, and the home of an enduring and influential parliamentary democracy. Since 1945, the UK has faced unprecedented challenges as it has come to terms with the loss of great power status, the surrender of its colonial territories, the decline of its staple industries, and growing pressures threatening to tear apart the union holding together England, Wales, Scotland, and Northern Ireland.

In this book, Adrian Bingham guides readers through the key developments in British post-war history to reveal how the nation was shaped by the legacies and lessons of the past. The UK has become a more diverse, pluralistic, and mobile society, but it remains one struggling...

Summary: European integration has had many successes and failures, Brexit being one of the biggest failures. Despite the setbacks, the EU has been acquiring more functions and members and has now reached a stage where it needs to become a political adult.

In this book, one of the world's leading authorities on Europe provides a lucid and wide-ranging appraisal of contemporary European affairs – of how the EU became what it is today and the key challenges Europeans must now confront. These challenges include the search for a common foreign and security policy that will also require a more symmetrical transatlantic relationship; the search for democracy beyond the nation-state; more inclusive societies; the development of the euro into a fully-fledged currency; a higher degree of autonomy in high technology and the greening of economies.

In Tsoukalis' view, what is at stake in these challen...

Summary: The proliferation of social media has provided ideal conditions in which feelings of anger and frustration can be expressed and shared, forming a deep pool of resentment that is being drawn upon and exploited by populist and authoritarian leaders.

In his new book, Joseph Vogl shows how this dynamic is rooted in the fusing of finance capital and information in a new form of information capitalism that is reshaping the affective economy of our societies. The capital accumulation strategies of powerful new platforms and social media are pushing people into fragmented, opposing and conflictual communities where resentment is nurtured and grows, cutting off and closing down pluralistic spaces of action. The feelings of grievance and rejection generated by capitalism are redirected into attacks on migrants, foreigners and others, thereby deflecting their critical potential and bo...

Summary: What is the relation between politics and the world? It might seem that global capitalism has created one world, but this is an illusion because capitalism creates a world of objects and money that divides human existence into regions separated by fences and walls built to keep some people out. In place of this falsely unified world of global capitalism, we need to assert a fundamental principle – namely, that there is one world of living subjects. This, in Badiou's view, is the categorical imperative of all true politics.

The one world of living subjects is the place where an infinity of differences and identities exist. Hence foreigners are not a problem but rather an opportunity and a gift. They bear witness to the youth of the world in its infinite variety, and it is with this youth that the politics of the future rests. Foreignness is the means by which existence is re...

Summary: Climate change is an ethical failure. Floods, fires, droughts, and extreme weather caused by climate change are already killing people and ruining lives on a massive scale. These avoidable impacts hurt the most vulnerable among us first, and worst. Why have we failed to prevent climate change? How can we mobilise to do better politically, socially, and economically? Where does the greatest responsibility for action lie?

In this book, Catriona McKinnon unravels the vital contributions made by engaged political theory to urgent climate challenges left unmet by a lack of political will. These challenges, and our political inertia, cannot be tackled without addressing questions of responsibility, collective duty, fairness, harm, techno-optimism, the value of nature, and the future of humanity. McKinnon's philosophical analysis is interwoven with discussion of the latest climate scien...

Philosophy / Political

Summary: On 20 May 1961 Foucault defended his two doctoral theses; on 2 December 1970 he gave his inaugural lecture at the Collège de France. Between these dates, he published four books, travelled widely, and wrote extensively on literature, the visual arts, linguistics, and philosophy. He taught both psychology and philosophy, beginning his explorations of the question of sexuality.

Weaving together analyses of published and unpublished material, this is a comprehensive study of this crucial period. As well as Foucault's major texts, it discusses his travels to Brazil, Japan, and the USA, his time in Tunisia, and his editorial work for *Critique* and the complete works of Nietzsche and Bataille.

It was in this period that Foucault developed the historical-philosophical approach he called 'archaeology' – the elaboration of the archive – which he understood as the rules that make possible en

Summary: The threats of emerging diseases have shaken certainties about health systems, the effectiveness of governance, lifestyles and the reality of national sovereignty. The Covid-19 Crisis analyzes the global issues related to the emergence of the SARS-CoV-2 virus through investigations and reflections related to both the epidemic itself (epidemiology, computerized surveillance tools and vaccines) and to the societal issues it raises (work, innovation, religious practices, behaviors and societal models).

This eclectic approach highlights scientific working methods that meet the requirements of health crises, as well as technical solutions and societal practices adapted to epidemic situations. It also presents feedback and testimonies.

In *CBT and Existential Psychology: Philosophy, Psychology, and Therapy*, distinguished clinical psychologist Dr. Michael Worrell delivers a singular exploration of the relationship between diverse forms of contemporary cognitive behaviour therapy and existential phenomenology. Written for both experienced and beginning CBT therapists, as well as therapists who practice from an existential perspective, this book clarifies and discusses the potential and challenges presented when these two different schools of thought and practice are brought into dialogue.

The author outlines, in accessible fashion, the implications and possibilities offered by the combination of CBT and existential practice. He also presents a series of discussions

Summary: The first textbook to explore diversity by demonstrating how satirical content can advance the discussion and change attitudes

Engaging in diversity and promoting inclusion means working to remove institutional inequities and actively assist those who have suffered from these inequities. In our changing media and cultural environment, satire has emerged as an increasingly popular approach for promoting diversity and inclusion. Effective satire highlights the absurdity of marginalization processes, but misinterpretation can potentially reinforce historical power dynamics and perpetuate marginalization.

Diversity and Satire examines how satire in both traditional media and new spaces reinforces or disrupts issues of marginalization in the United States. Critically analyzing many different forms of satire, this innovative textbook helps students understand what makes effective satire

Summary: Covering almost 8% of the earth's terrain, lichens are living beings which are familiar to everyone, known to no one. They are one of those organisms that seem to offer nothing to hold our gaze. But the more time we spend with lichens, the more they reveal their beauty, their mysteries and their strange power of attraction. Part-algae and part-fungus, lichens call into question our customary ways of classifying forms of life and allow us to conceive of an ecology which is no longer based on distinctions between nature and culture, urban and rural, competition and cooperation.

The result of several years of investigation carried out on several different continents, this remarkable book offers an original, radical and, like its subject matter, symbiotic reflection on this common but mostly invisible form of life, blending cultures and disciplines, drawing on biology, ecology, phi...

Summary: Under what conditions could ecology, instead of being a set of movements among others, organize politics around an agenda and set of beliefs? Can ecology aspire to define the political horizon in the way that liberalism, socialism, conservatism and other political ideologies have done at various times and places? What can ecology learn from history about how new political movements emerge and how they win the struggle for ideas, long before they can translate their ideas into parties and elections?

In this short text, consisting of 76 discussion points, Bruno Latour and Nikolaj Schultz argue that if the ecological movement is to gain ideological consistency and autonomy, it must offer a political narrative that recognizes, embraces and effectively represents its project in terms of social conflicts. Political ecology must accept that it brings along division. It must provide a ...

Summary: It is commonly thought that, thanks to globalization, nation-state borders are becoming increasingly porous. Steffen Mau shows that this view is misleading: borders are not getting more permeable in the era of globalization, but rather are being turned into powerful sorting machines. Today they fulfil their separation function better and more effectively than ever.

While the cross-border movement of people has steadily increased in recent decades, a counter-development has taken place at the same time: in many places, new deterrent walls and militarized border crossings are being created. Borders have also become increasingly selective. Supported by digitalization, they have been upgraded to smart borders, and border control has expanded spatially on a massive scale, even becoming a global enterprise that is detached from territory. Steffen Mau shows how the new sorting machines ...

Summary: What does a nation of immigrants think and feel about immigration? Recent accounts of immigration policy routinely cast Americans as divided into two warring camps – one fueled by threat to livelihoods and way of life, the other by a fervent cosmopolitanism that sees the nation-state as passé.

This counter-intuitive book shows that these accounts miss the mark. First, almost all Americans hold a mix of "pro-" and "anti-immigrant" opinions. Their views are pragmatic and flexible rather than dead-set. Second, opinions about immigration are more powerfully influenced by liberal values and concerns about the well-being of American society as a whole than by identity politics. Third, the assimilation Americans demand from immigrants matches patterns of integration that Hispanic and Asian immigrants overwhelmingly follow. Finally, American attitudes toward immigrants are "exceptio..."

Summary: The year 2000 was the first time the US Census permitted respondents to choose more than one race. Although the US has long recognized that a "mixed-race" population exists, the contemporary "multiracial population" presents different questions and implications for today's diverse society.

This book is the first to bring a systematic critical race lens to the scholarship on mixedness. Avoiding the common pitfall of conflating "mixed" with "multiracial," the book reveals how identity forms and fluctuates such that people with mixed heritage may identify as mixed, monoracial, and/or multiracial throughout their lives. It analyzes the dynamic and various manifestations of mixedness, including at the global level, to reveal its complex impact on both the structural and individual levels. *Multiracial critically examines topics such as family dynamics and racial socialization, multiraci...*

Summary: Some people facing violence and persecution flee. Others stay. How do households in danger decide who should go, where to relocate, and whether to keep moving? What are the conditions in countries of origin, transit, and reception that shape people's options?

This incisive book tells the story of how one Syrian family, spread across several countries, tried to survive the civil war and live in dignity. This story forms a backdrop to explore and explain the refugee system. Departing from studies that create siloes of knowledge about just one setting or ""solution"" to displacement, the book's sociological approach describes a global system that shapes refugee movements. Changes in one part of the system reverberate elsewhere. Feedback mechanisms change processes across time and place. Earlier migrations shape later movements. Immobility on one path redirects migration along others...

Summary: Controlling reproduction – who has children, how many, and when – is important to states, communities, families, and individuals cross the globe. However, as Nancy Riley and Nilanjana Chatterjee argue, the stakes are even higher than might at first be appreciated: controlling reproduction is an incredibly powerful tool.

Contests over reproduction necessarily involve control of women and their bodies. Yet because reproduction is so intertwined with other social processes and institutions, its control extends far into most corners of social, economic, and political life. This book explores the role of various actors, focusing on what happens when social institutions beyond the individual – including state, religion, market, and family – are involved in the negotiation of reproductive power. Throughout, the authors engage examples pulled from across the world, such as direct fertili...

Social Science / Gender Studies

Summary: Who counts as a woman? This question lies at the heart of many public debates about sex and gender today. While we increasingly recognise the desire of some to eliminate the sex binary in law, a particular boiling point emerges through conflicting demands over women's spaces. Which should govern access to these – sex or gender identity?

Karen Ingala Smith, a veteran campaigner for women's and girls' rights, opts for the first choice. In this trenchant critique of inclusivity politics, she argues that we cannot ignore the wealth of evidence which shows that people of the female sex have a unique set of needs which are often not met by mixed-sex spaces. Drawing on her 30 years of experience in researching and recording men's violence against women and girls, she outlines how certain spaces, including refuges, benefit from remaining single sex – and what they stand to lose. Summary: Sociological analysis has been replete with debates about “micro” and “macro,” individual and society, but all too often these miss the point: interacting groups are the hinge that connects them. To understand how structures matter and how individuals navigate them, we must take groups and people in local communities seriously.

Gary Alan Fine and Tim Hallett skillfully argue that sociologists have the obligation to examine the role of small communities in the creation of both the interaction order and structural realities. With novel concepts and rich ethnographic examples, this book describes how group commitments shape selves and society, emphasizing the importance of a meso-level approach to social organization. Focusing on shared action, Fine and Hallett provide new models of identity, culture, conflict, and control. They conclude by considering how a network of groups can pr...

Summary: Artificial intelligence not only powers our cars, hospitals and courtrooms: predictive algorithms are becoming deeply lodged inside us too. Machine intelligence is learning our private preferences and discreetly shaping our personal behaviour, telling us how to live, who to befriend and who to date.

In *Algorithmic Intimacy*, Anthony Elliott examines the power of predictive algorithms in reshaping personal relationships today. From Facebook friends and therapy chatbots to dating apps and quantified sex lives, Elliott explores how machine intelligence is working within us, amplifying our desires and steering our personal preferences. He argues that intimate relationships today are threatened not by the digital revolution as such, but by the orientation of various life-strategies unthinkingly aligned with automated machine intelligence. Summary: Digital hyperconnectivity is a defining fact of our time. The Silicon Valley dream of universal connection – in which everyone and everything is connected to everyone and everything else, everywhere and all the time – is rapidly becoming a reality. Hyperconnectivity has colonized the self, reorganizing our attention and reshaping our ways of thinking, seeing, and feeling. It has channeled social interaction into platform-friendly, surveillance-enhancing forms and formats. It has converted the whole of human culture into an unending stream of digital content, served to us by personalized algorithms. It has given birth to gigantic oligopolies with unprecedented power over our future. It has fragmented the public sphere, polarizing – and in some ways paralyzing – the citizenry, and strengthening populist challenges to mediating institutions.

Social Science / Sociology

Series: Key Concepts

Summary: There is little question about the colossal importance of inequality in society today. With huge amounts of wealth concentrated in the hands of a few 'super-rich', growing social movements challenging the power wielded by rich elites, and opinion polls demonstrating popular concern with the gaps between the better and worse off, contemporary inequality is of great public and political interest.

However, many important questions continue to be subject to debate. How much inequality is acceptable? Is inequality increasing and, if so, where? What are the consequences of inequality and who is most affected?

Lucinda Platt expertly provides the reader with insights into these debates and with the tools to evaluate the various claims made about the extent and implications of contemporary inequality. Addressing both conceptual issues relating to the meaning of inequality and practical cha

Social Science / Sociology

Series: Economy and Society

Summary: Bringing the study of international inequality back into the core of sociological theory, this book offers a user-friendly introduction to development and underdevelopment. In doing so, it places various approaches to the definition and measurement of "development" against the backdrop of broader sociological debates.

Schrank draws concrete examples from different regions and epochs to explore sociological thinking about development and underdevelopment informed by the latest currents in economic sociology. Across a series of chapters, he identifies relationships between mainstream and Marxist approaches to the study of international inequality; uses classical and contemporary social theory to develop a parsimonious typology of national development outcomes; addresses cross-border learning and diffusion in light of the latest developments in organization theory; considers the rol...

**The Spirit of Digital Capitalism**

Social Science / Sociology

Summary: Digital technologies are now central to the machinations of capitalism. But how are they changing forms of capital accumulation and domination, and in what terms are these changes being promoted and justified by a new, incredibly powerful techno-elite?

In this book, Jenny Huberman takes on these questions. Beyond demonstrating how digital technologies make new forms of capital accumulation possible, she interrogates the ideological transformations that have accompanied the emergence of digital capitalism. She examines how business gurus, entrepreneurs, and venture capitalists make claims about the way digital technologies contribute to the common good, foster collaboration and connectivity, and render life more convenient, even if this convenience comes at the expense of once cherished values such as privacy and liberty. Ultimately, Huberman argues that the spirit of digital capi...

Law

Summary: What is social control? How do social controls become part of everyday life? What role does the criminal justice system play in exerting control? Is the diagnosis and treatment of mental illness a form of social control? Do we need more social controls to prevent terrorist atrocities?

In this third edition of his popular introduction, James J. Chriss carefully guides readers through the debates about social control. The book provides a comprehensive guide to historical debates and more recent controversies, examining in detail the criminal justice system, medicine, national security, and everyday life. Chriss blends theoretical discussion with a rich range of contemporary examples to illustrate the ways in which social control is exerted and maintained. The updated edition includes new or expanded material on autism, trauma and PTSD, sports participation, the murder of George Floyd.

Science Studies Meets Colonialism

Amit Prasad

Pub Date: 12/12/22
\$24.95 USD
200 pages
Paperback
Science / Philosophy & Social Aspects

Summary: The field of Science and Technology Studies has long critiqued the idea that there is such a thing as a universal and singular "Science" that exists independently of human society, interpretation, and action. However, the multiple significant ways in which colonial legacies impact and shape this project have often remained out of sight at the edges of the discipline.

In this important book, Amit Prasad seeks to rectify this erasure, demonstrating that problematic idealized imaginaries of science, scientists, and the scientific realm can be traced back to the birth of "modern science" during European colonialism. Such visions of science and technology have undergirded the imagination of the West (and thus its others), constructing hierarchies of technological innovation and scientific value, but also unexpectedly leaving society vulnerable to contemporary threats of misinformation...

Intimacy : Personal Relationships in Modern Societies (2nd Edition)

Lynn Jamieson

240 pages

Paperback

Social Science / Sociology / Marriage & Family

Summary: Where do we find intimacy today? Are our interactions with acquaintances and strangers, particularly online, a sign of deepening, widespread intimacy? Or are our personal relationships becoming increasingly empty, structured by selfish individualism?

In this second edition of her landmark book, Lynn Jamieson provides an updated exploration of the many types of intimate relationships that are formed in modern societies: families, kinship, friendships, parent-child relationships, sexual relationships and couple relationships. Examining new evidence, the book investigates the nature of such relationships across societies and explicitly questions whether the association of intimacy with face-to-face relationships has passed in an era in which people use digital technologies to stay connected at a physical distance. Jamieson pays particular attention to the issue of ethnocentrism and ...

Bourdieu in the City : Challenging Urban Theory

Wacquant

9781509556441

Pub Date: 1/17/23

288 pages

Paperback

Social Science / Sociology / Urban

Summary: Building on three decades of comparative research on marginality, ethnicity, and penalty in the postindustrial metropolis, Loïc Wacquant offers a novel interpretation of Pierre Bourdieu as urban theorist. He invites us to explore the city through what he calls *the trialectic of symbolic space* (the mental categories through which we perceive and organize the world), *social space* (the distribution of capital in its different forms), and *physical space* (the built environment). On this reading, Bourdieu's topological sociology gives us the tools both to energize and also to challenge the canon of urban studies and to redraw their theoretical landscape.

Wacquant proposes to rethink "the urban" as the domain of the accumulation, diversification, and contestation of capitals (in the plural) and the ground for the commingling and collision of variegated habitus, which makes the city a c...

How Cities Can Transform Democracy

Ross Beveridge, Philippe Koch

9781509545995

\$22.95 USD

200 pages

Paperback

Social Science / Sociology / Urban

Summary: We live in an urban age. It is well-known that urbanization is changing landscapes, built environments, social infrastructures and everyday lives across the globe. But urbanization is also changing the ways we understand and practise politics. What implications does this have for democracy?

This incisive book argues that urbanization undermines established certainties of nation-state politics and calls for a profound rethinking of democracy as a project. Ross Beveridge and Philippe Koch provide a novel way of seeing democracy like a city, shifting scholarly and activist perspectives from institutions to practices, from jurisdictional scales to spaces of collective urban life, and from fixed communities to emergent political subjects. Through a discussion of examples from around the world, the book shows that distinctly urban forms of collective self-rule are already apparent. The...

Pandemic Urbanism : Infectious Diseases on a Planet of Cities

Social Science / Sociology / Urban

Series: Urban Futures

Summary: Emerging infectious disease outbreaks in recent decades have transformed the very nature of urban life worldwide, even as the extent and experience of pandemics are shaped by the planetary urban condition. *Pandemic Urbanism* critically investigates these relationships in a world faced with an unprecedented global pandemic, the first on a majority urban planet.

The authors reveal the historical context of recent infectious disease events and how they have variously transformed the urban social fabric. They highlight the important role played by socio-ecological processes associated with the global urban periphery – suburban or post-suburban zones and hinterland areas of "extended" urbanization – bringing to light the increased significance of social media, changing mobility patterns, and new forms of urban governance and pandemic response. The book takes forward theoretical appro...
